

Reinforcer

CosBond Reinforcer uses the same powerful adhesive as CosBond Attach & Build, but is backed by an incredibly strong and flexible synthetic material that won't rip or tear. Tested to 100 lbs. pull-strength, Reinforcer is perfect for use in seams, attaching straps and zippers, and other places where a tough and strong hold is required. Like all CosBond products, Reinforcer works great on EVA foam, L200 foam, XPS foam, thermoplastics, Worbla, Sintra, cloth, wood, metals, and much more. Available in black and white, Reinforcer is also paintable so you can easily blend it into your cosplay.

INSTRUCTIONS FOR USE FOR STRAPS: 1) Make sure surfaces to be adhered are smooth and clean, 2) Adhere nylon strap to material using CosBond Attach & Build, 3) Cut CosBond Reinforcer to a size and shape that will fully cover the adhered portion of the strap with a minimum of 1/2" extra on all sides including the end, 4) Peel off release paper on Reinforcer and press exposed adhesive to cover the strap while adhering the excess to material underneath (rub firmly to ensure Reinforcer is firmly adhered)
